Example on using box

Exemplo 1

Em uma versão da linguagem BASIC, o nome de uma variável é uma sequência de um ou dois caracteres alfanuméricos, em que letras maiúsculas e minúsculas não são distinguidas. Além disso, um nome de variável deve começar com uma letra e deve ser diferente das cinco sequências de dois caracteres reservadas para o uso de comandos. Quantos nomes diferentes de variáveis são possíveis nesta versão do BASIC?

Solução

Pela regra da soma, $V = V_1 + V_2$. Como as variáveis só podem começar com letras, temos que $V_1 = 26$. Pela regra do produto, há $26 \cdot 36 = 936$ sequências de tamanho 2 que comecem com uma letra e terminam com um caracter alfanumérico. Porém, não se deve usar 5 variáveis reservadas. Assim, $V_2 = 26 \cdot 36 - 5 = 931$. Logo, há $V = V_1 + V_2 = 26 + 931 = 957$ nomes diferentes para variáveis nesta versão do BASIC.

Example on using table

Table 1: Countries and their codes

Country Name	Code 2	Code 3
Afghanistan	AF	AFG
Aland Islands	AX	ALA
Albania	AL	ALB
Algeria	DZ	DZA

Clean layout and two-column text

This is a text in first column.

$$E = mc^2$$

$$1 + 2 + \cdots + k = \frac{k \cdot (k + 1)}{2}.$$

- First item
- Second item

This text will be in the second column and on a second thought this is a nice looking layout in some cases.

1. First
2. Second

Q3: Income vs Transportation

Can income be predicted accurately from commute and location information

Figure 2: Income by Commute.

Figure 3: Income by Area.

Preliminary Empirical Study

Sample frame title

This is a text in second frame. For the sake of showing an example.

- Text visible on slide 1

Question 3: Can income be predicted from commute and location information

The purpose of this question was to examine relationship between where people live and how they have to commute, and test the accuracy of a model we built based on these predictive elements
